

Urban Thinkscapes

building for knowledge and innovation

Luleå, Feb 2016

Dr Emma Read Källblad, KTH

How can we develop the city – its buildings, the spaces around them and its points of connection – to enable **and sustain** a Learning Society?

Overview

1. What research tells us about...
 - The knowledge society
 - The processes of making knowledge and innovations
2. Design Principles for making a Learning City.
3. Design Processes for making a Learning City.

The Knowledge Society

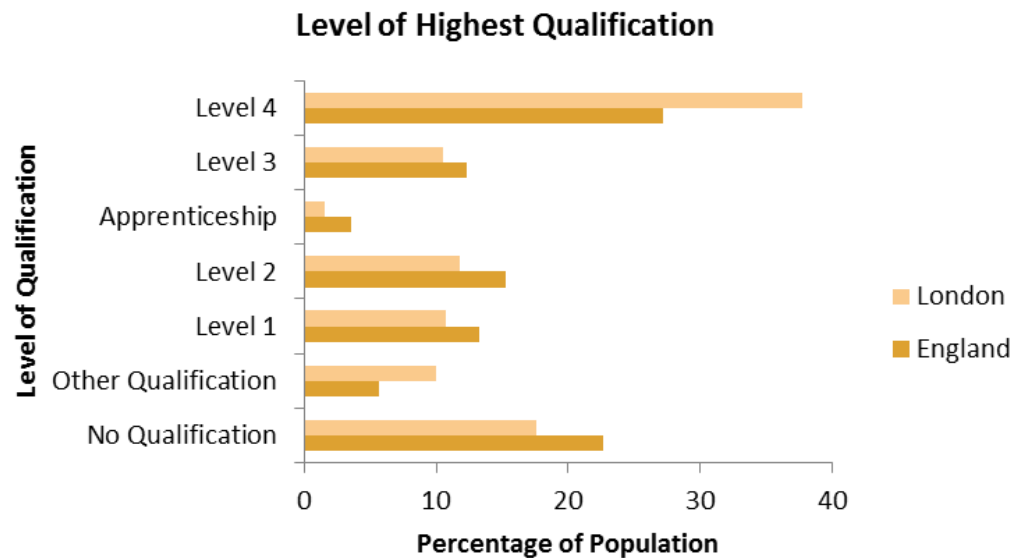

University Attendance in England

In 1950 just 3.5% of a cohort went to university in England. In 2011 49% of the peer group went to university with 65% qualified to enter some type of tertiary education. 55% of those entering university are women. The largest degree educated group is currently under 40 – so this is an emerging trend.

Urban Intelligence

People go to (large) cities to study and then stay.

44.7% of people in inner London have a degree, compared with 27.4% for the nation as a whole.

Urban Benefits

*Smart people push **UP** urban wages **for everyone**.*

As the number of college graduates in metropolitan area increases by 10%, individual earnings increase by 7.7%, ***no matter what level of education an individual holds.***

Glaeser & Gottlieb 2008

What's happening in knowledge cities?

Cities display a superlinearity as they grow and this holds true for knowledge production.

The addition of one more person to a city improves creativity by more than one.

$$1+1=2+$$

Bettencourt et al. 2007

Knowledge is urban, as well as individual, rocket fuel.

What's the mechanism that makes cities so creative?

Buzz: face-to-face connection in cities

- Cities enable face-to-face contact between informed and diverse people.
- This produces higher levels of innovation and there by economic prosperity.

Storper and Venables 2004

Buzz: Face-To-Face Contact and the Urban Economy

Cultural norms about where knowledge should be produced

Greening and "Knowledging" Cities

Cambridge Science Centre, UK

The Urban Thinkscape

Understanding how knowledge works enables informed design and planning

Core Principles

1. New ideas tend to emerge through **combining** different elements of old ideas in an original manner.
2. **Knowledge spills over**; ideas spread easily.
3. Ideas are **fragile** and don't travel well.
4. Ideas can be shared without being **diminished**, unlike many other resources.

Design Principles for a Learning City

1. Density	3. Edges
3. Diversity	4. Dynacism

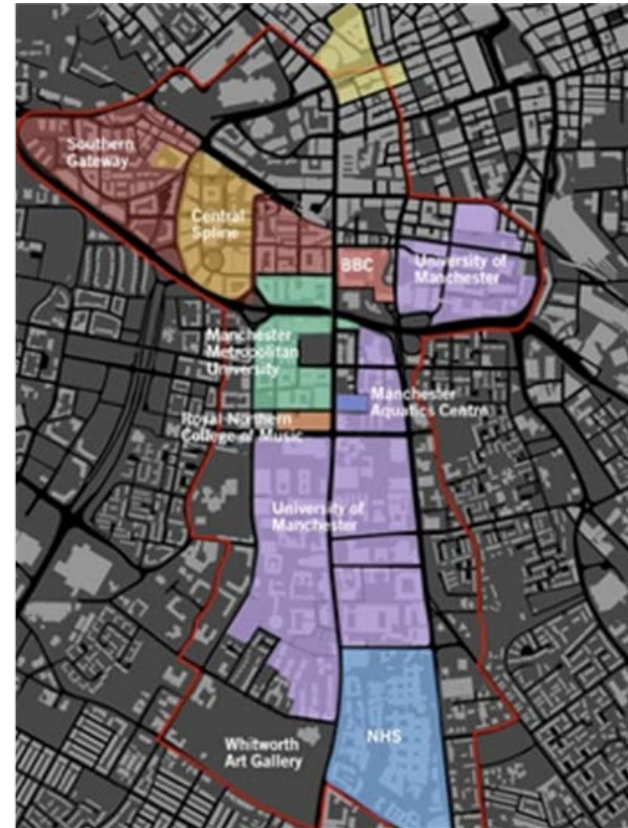

Density

- Knowledge and ideas "spill over" – but do not travel well.
- Building knowledge-creating assets close to each other is important.
- **Density in use** (temporal density) is also vital – 24/7 thinking.

The Knowledge District

- Bring assets together.
- Increase intensity.
- Increase interaction.
- Brand.

City of Manchester, Manchester Knowledge Corridor UK

Diversity

- New knowledge and insights require diversity.
- The foundation of this diversity is human diversity.
- Diversity in planning and design also plays a vital role.

Diversity in building type and quality

"Nobelhuset" by David Chipperfield & Christoph Felger, David Chipperfield Architects Berlin

Aalto Design Factory, Finland

Edges

Innovation happens when **different types** of knowledge (*well, knowledgeable people*) interact with each other.

In planning and design, its important to think about the **edges** where different types of knowledge/people come in to contact with each other.

From Centre to Edge

City Planning

Looking
outwards

KTH Campus Plan

University Building: UCL, Institute of Making

Dynacism

- Knowledge should change and evolve.
- Flexible spaces and re-purposed buildings are essential.

QH Group

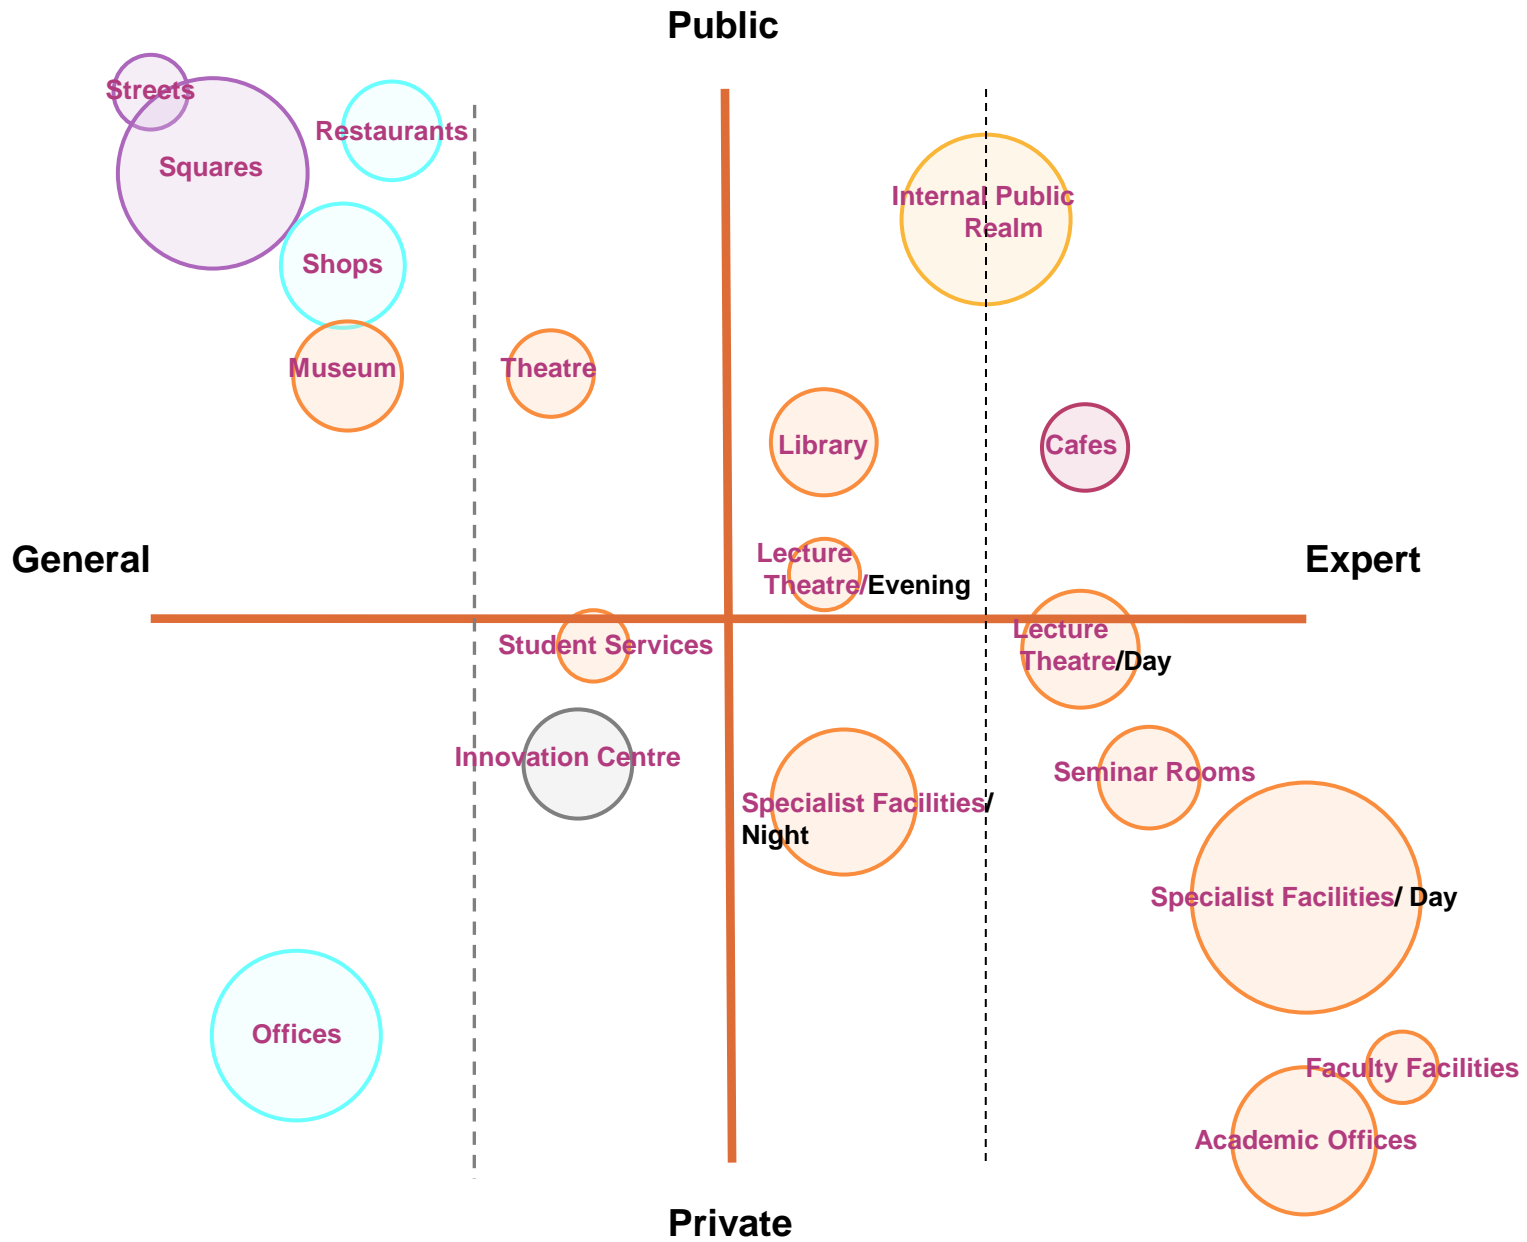

LSE, London, June 2013

- University Owned
- University Owned+Leased
- Public Ownership
- Level 1 Security
- Level 2 Security

CSM, London, June 2013

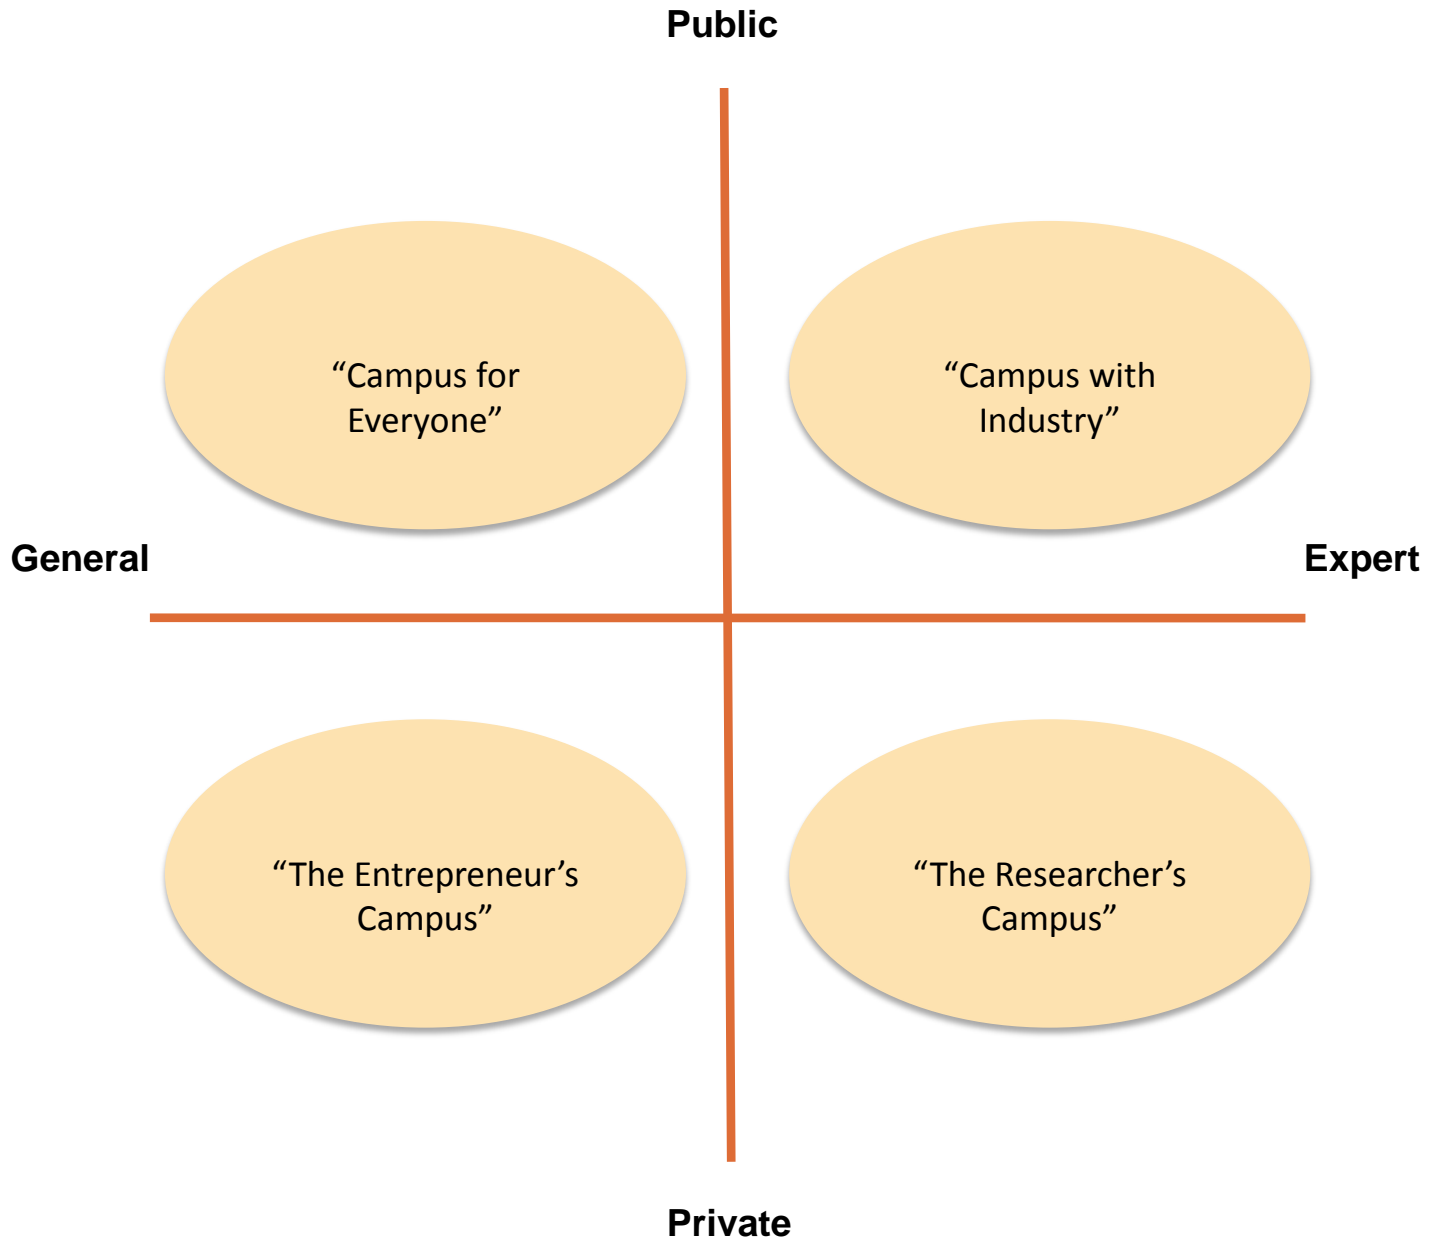

LSE

- "Traditional" campus – academic offices and lecture halls.
- Owned by the university.
- Early and tight security.
- Internal "public" realm that's really private.

CSM

- A greater variety of space types.
- A greater variety of owners.
- Later tight security – and a large "in-between", semi-secure realm for public-private interaction
- Active engagement in the external public realm by the university.

Reflections for Luleå

Its all about people.

- This is a numbers game; more people create more creativity. How can the university, its campus and its knowledge partners help attract and retain people with ideas in Luleå?
- Remember the importance of "buzz" – face-to-face contact between diverse people. **What's the coffee strategy?**
- A focus on the design of **edges** helps enable buzz. **What's the ground floor strategy?**
- The process of campus making and re-making can be a creator of buzz.

End – and thank you!
