Overall Campus

To keep you updated regarding what is happening in the area and have access to information even between these mailings, we recommend that you download the Mitt Campus app, where we regularly update with current information about things that may affect your everyday life. There is gathered information about the campus, about the buildings and contact information for our employees. In addition, you can easily create and follow your error report.

The pop-up office Akademiska Hus previously had in house B is now in Corona times digital. Every other Thursday you can chat or talk to us at 11.00-13.00 via Teamslänken below, the next opportunity is 25 February. Take the opportunity to ask your questions about, for example, the development of the campus or one of the ongoing projects, we hope to see you!

Outdoor environment

Work on shoveling the roofs is ongoing throughout the campus area and we would like to remind you that in connection with snow shoveling, it is important to respect the barriers that are set up. The barriers are for your safety and must not be broken under any circumstances.
Information letter week 07-08 2021

Luleå tekniska universitet

Rainbow avenue

No work is currently underway within the project for Regnbågsallén, the roadblocks that exist will remain until the work is resumed when the weather allows in the spring. These must not be violated.

Hus A/α

The last adjustments are in progress A117, LKAB hall. It is about changing the lighting at the whiteboard and strengthening the general lighting in the front part of the auditorium.

House B/β

Maintenance is underway in the boardroom B1309, where adjustments are being made for new furnishings.

Work will take place on the roof of the library in the coming weeks. We fix the minor damage that occurred in connection with the snowstorm a couple of weeks ago and ensure that the same thing does not happen again. Access to the roof is via the stair tower that has been built on the outside to disrupt the business as little as possible.

House C

Stage 1 of the wall replacement will be completed in February. Stage 2 is in full swing and at present the outer walls are being stripped off at the same time as floor maintenance measures in corridors level 2 and level 3 are being implemented. In connection with the removal of tiles in the corridors, noises occur that can be perceived as severely disturbing and we apologize for the inconvenience this causes.

Stage 3 will begin during week 6 and the first measure is to erect the building fence towards Regnbågsallén, after which scaffolding will be erected with weather protection before the façade begins to be dismantled.

From the project, it is reminded that entrance C12 only functions as an escape door and not as an entrance door. Access to the C-house from Regnbågsallén is through entrance C14.

House F

Monday through Wednesday week 8, asbestos removal on the facade of the MCE lab will be carried out. The decontamination will take place within a cordoned off area and it is safe to stay both inside and outside the house while the work is in progress.

House K

Replacement of windows is in progress, the last work is expected to be completed in the coming weeks.
