

Planned/Ongoing Activities during week 48 & 49

Luleå University of Technology

Information letter week 48-49, 2019

My wishes for an early winter this year, seems to have been a bit much to hope for. Now we have steady rain and debris, darkness has once again embraced streets and paths. I would like to take the opportunity to send an appeal to everyone in the traffic: Be afraid of each other and show consideration and care. Slow down, keep your distance and be clear about your intentions. To all unprotected road users, I particularly urge you to use lighting whenever possible and ALWAYS use reflexes.

I the past week, actions along the Rainbow Avenue have been expanded in scope and Skanska has started to carry out excavation work in some places outside the A-, B-, D-, and E-houses. The expansion of S-pavilion and the installation of the T-pavilion have come to a stage where you at least can imagine the end result, although there is a good way to go before completion.

Planned/Ongoing Activities during week 48 & 49

Luleå University of Technology

Overall Campus

There are many activities going on at Campus now and it will cause increased traffic and movements in areas where it's normally a lot less movements. Be attentive and show consideration.

Unfortunately, there have been some vandalism to fences and violations of barriers to construction sites at the Campus area, mainly around the C-house. This is both a criminal act and entails increased costs but is above all dangerous. Let us hope that we don't see such tommy-rots from now on.

Outdoor environment

During the prevailing weather, the risk of slipping accidents is high. Be careful where you step, especially at entrances.

Our contractors who work along the Rainbow Avenue have been instructed to have sand and gravel to use if they cause extra slippery spots. Parkkompaniet has extra oversight regarding the need for sanding and gravel.

Rainbow avenue

Relining of sewage pipes under the Rainbow Avenue will continue coming week and will do so as long as the weather allows. Some aberrant odor may occur during the work, the odor however is harmless.

During the following weeks, Skanska will continue with digging operations. As been announced before, a hole will be done between A- and D-house, to install a new stormwater well. In addition, a few minor excavation works will be carried out along the rainbow hall, partly to identify old covered wells, but also to measure heights of culverts.

A/α-house

The Rainbow Avenue will be closed off between A- and D-house for excavation work, described above. Some entrances will be inaccessible. Clear signage and reference to alternative entrances will be put up.

Planned/Ongoing Activities during week 48 & 49

Luleå University of Technology

B/ β -house

A common entrance

A common entrance conducted formal inauguration and commissioning on Monday, week 47. The construction site has been formally discontinued. It remains to mount the blinds over the information counter. This will be mounted as soon as it is delivered, hopefully before the spring term begins in January.

Library

Sun-Off is mounting sun protection. Barriers outside the library between the B- and A-house restrict passage somewhat, if possible, choose another route.

The assembly will cause some noise disturbance when the mounting to the sunshades will be fastened. Consultation with businesses concerned, basically the Polar Research Secretariat, will be conducted before disruptive measures are initiated.

Planning is underway for the replacement of a substation inside the Polar Research Secretariat. During the replacement, interruptions in power supply will occur. The aim is to perform the exchange during Christmas holiday to cause as little disturbance as possible. When planning is completed, affected businesses will be contacted for consultation.

C-house

S-pavilion

The assembly of the supplementary sections of the S-pavilion will start on Tuesday week 48. During week 48-49 the modules will be lifted in place in stages, which will cause limited access along Universitetsvägen between the C-house and Porsöhallen while lifting is in progress.

During week 48-49 interior work will be carried out partly in the new pavilion modules, but also in previous modules to dock the modules together.

D-house

The Rainbow Avenue will be closed off between A- and D-house for excavation work, described above. Some entrances will be inaccessible. Clear signage and reference to alternative entrances will be put up.

Luleå University of Technology

E-house

Indoor environmental investigation

The indoor environmental investigation will continue according to committed extent. The investigation is somewhat behind the planed timetable, but current assessment is that lost time will be able to be incorporated. If the delay will affect planned interventions, affected businesses will be notified of such and a new proposal of time for actions will be communicated.

F-house

Recovery after construction measures

The work with repairing of the damage to the interior walls that was done during the indoor environmental investigation is undergoing and is planned to be completed during week 49.

T-pavilion

Ground work for the T-pavilion will commence at the end of week 48. Some disturbance may occur as frozen ground may need to be broken up.

Some issues have arisen when cars are still parked opposite the Heavy Lab. This becomes especially important now that heavy construction machinery will begin work in the area.

Reminds NOT to park vehicles in the area that are marked for non-parking!

Students house

Renovation of areas for study sites begins on Monday week 48 in D2214 and D2215.

Pole star

Work in progress is internal completion and preparation for final inspection, which is scheduled to start during week 49.
