

SPOT the SPOT!

- a new part of Mitt Campus app

A digital innovation by group 11 for
The Akademiska Hus (AH) Challenge - Digital
Transformation and the Campus of the Future

App that will assist students to find the
perfect study spot according to their
preferences. Filter, book and give feedback!

FILTERS

Filter your study spot so it fits your preferences! You can filter by geographic location, number of people, handicap-friendliness, sound level, room size or in presence of computer, windows, plants or standing tables.

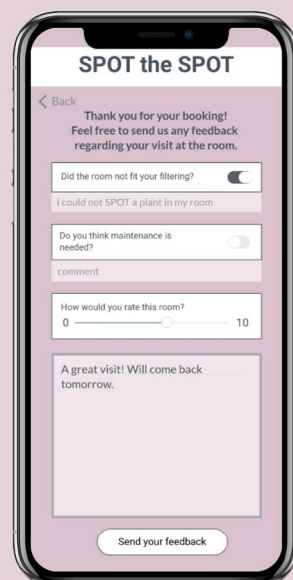

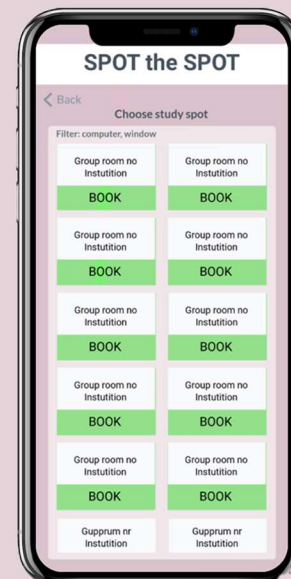

Get recommended group rooms based on your filtered preferences and book one!

Booking a room will create a personal access using the student card. Share the access with the friends - simply by adding their student id in the app.

This will allow students to leave the room while keeping all belongings safe.

If not accessed in 30 minutes, the booking will be deleted and the room will be free for anyone to use. Booking rules will be adopted as the Chalmers group room booking system is done today.

BOOKING

FEEDBACK

Not happy with the room? Fill in the feedback form to make Akademiska Hus know if any maintenance is needed or if the filter you applied did not match the room perfectly!

SPOT the SPOT will use presence sensors, Accessy and an internal database of group rooms. Bookings will use CID or similar systems for other campuses.

Despite this innovation not directly contributing revenue it will create massive value for your clients which will grant you a better position in future negotiations.
